Revenue Trend over Time

Business Insight: The revenue analysis by product category reveals that **electronics** is the company's primary revenue driver, generating approximately **732.78 million**, which significantly exceeds all other categories. This indicates strong customer demand for electronic products and highlights the category's critical contribution to overall business performance. **Furniture** and **fashion** rank as the second and third highest revenue-generating categories, contributing approximately **109.09 million** and **67.82 million**, respectively. Although these categories generate substantially less revenue than electronics, they represent important secondary sources of income and demonstrate consistent customer interest. Categories such as **home goods**, **auto**, **toys**, and **books** contribute relatively smaller portions of total revenue. The large gap between electronics and the remaining categories suggests that the company's revenue is

Payment Method Distribution

Business Insight: The payment method distribution shows that **credit card** is the dominant payment option nearly half of all transactions about **443.31K orders (47.48%).** This indicates that customers strongly prefer credit cards due to their convenience, familiarity, and widespread acceptance. **PayPal** ranks as the second most popular payment method with **137.11K orders (14.68%)** highlighting a significant customer segment that prefers digital wallet solutions for faster and more secure online payments. The remaining payment methods include **voucher (9.27%)**, **bank transfer (8.97%)**, **Apple Pay (8.51%)**, and **debit card (8.42%)**, contribute relatively similar shares suggesting that customers value having multiple payment options available. Meanwhile, **boleto** records the lowest usage at **24,889 orders (2.67%)** indicating limited customer preference for this payment method. Overall, the distribution demonstrates that while credit cards remain the primary payment

Regional Logistical Bottlenecks

Business Insight: The regional logistics analysis shows that **California (CA)** handles the highest order volume with **447,809 orders**, followed by **New York (NY)** with **369,051 orders** and **Texas (TX)** with **284,394 orders**. These states serve as major operational hubs and contribute significantly to the company's overall sales performance. At the same time, these high-volume states also record the highest number of delayed orders. California alone accounts for **44,125 delayed orders**, followed by New York (**36,189**) and Texas (**27,829**). This suggests that regions with larger order volumes are experiencing greater pressure on logistics and fulfillment operations. Across all states, the proportion of delayed orders appears relatively consistent at approximately **10% of total orders**, indicating that delivery delays are not isolated to a specific region but may reflect broader capacity
