

Tutorial Link: [SAP Build Apps](#)

Introduction to SAP Build Apps

- AI-infused professional application development solution designed for anyone to quickly create apps without code regardless of role or skill level (no code low code)

Advantages

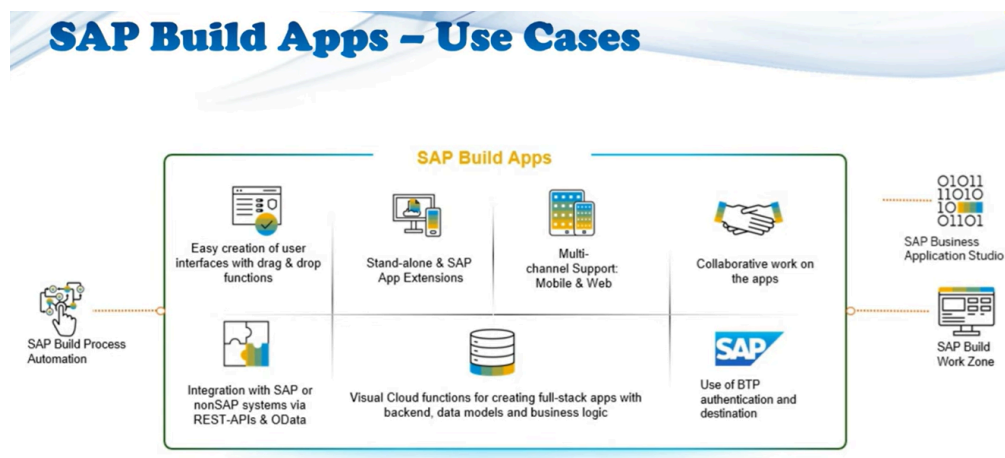

- Build user interfaces easily
- Create data models and business logic visually
- Integrate seamlessly

Core capabilities of SAP Build App

- Build Visually - Any customer can easily build visually by using drag and drop tools and intuitive interfaces
- Integrate Seamlessly - Help customer integrate their SAP solutions, application and system with each other
- Collaborate Effectively

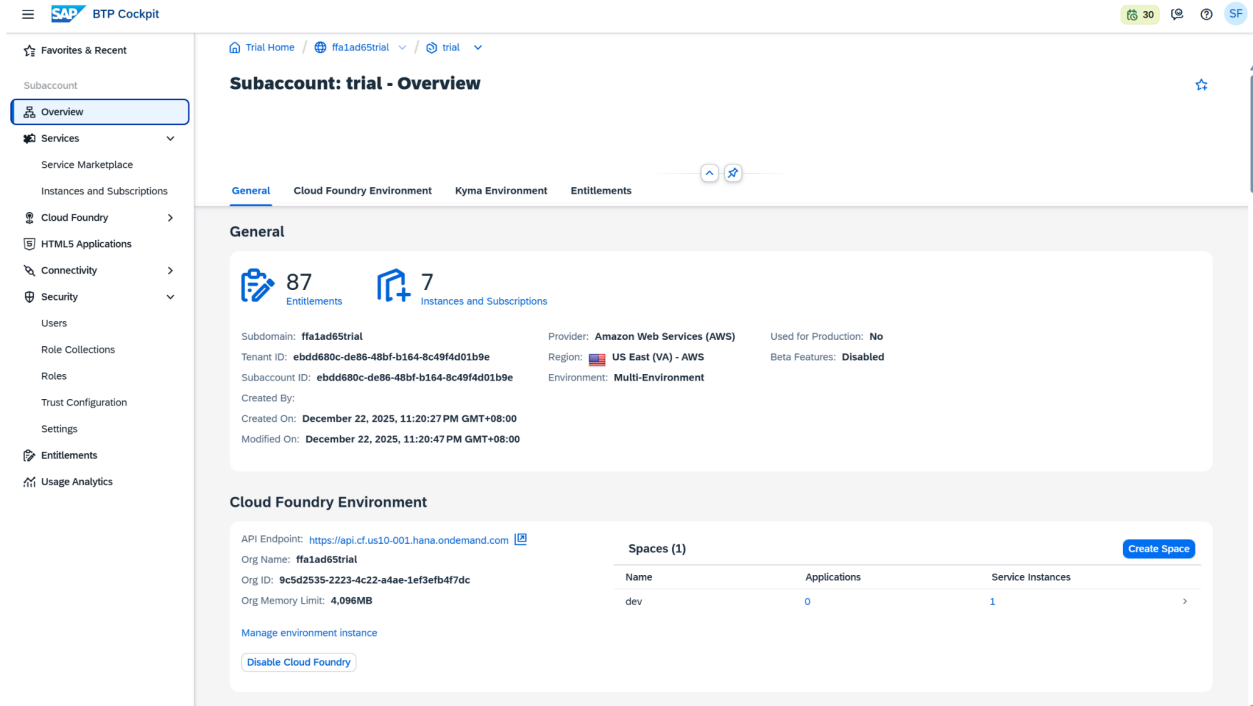

Technologies include:

- Application Development
- Automation
- Integration
- Data Analytics
- Artificial Intelligence

Setting up SAP Build App

1. Create an SAP account
2. Create a SAP BTP Cockpit trial account

The screenshot shows the SAP BTP Cockpit interface for a subaccount named 'trial'. The left sidebar contains navigation options like 'Overview', 'Services', 'Cloud Foundry', and 'Entitlements'. The main content area is titled 'Subaccount: trial - Overview' and includes tabs for 'General', 'Cloud Foundry Environment', 'Kyma Environment', and 'Entitlements'. The 'General' tab displays key information: 87 Entitlements, 7 Instances and Subscriptions, Subdomain: ffa1ad65trial, Tenant ID, Subaccount ID, Provider: Amazon Web Services (AWS), Region: US East (VA) - AWS, and Environment: Multi-Environment. It also shows creation and modification timestamps. The 'Cloud Foundry Environment' section provides the API Endpoint, Org Name, Org ID, and Org Memory Limit, along with a table for Spaces (1) showing a 'dev' space with 0 Applications and 1 Service Instance.

The screenshot shows the SAP BTP Cockpit interface for the 'Global Account Explorer'. The left sidebar includes 'Account Explorer', 'Resource Providers', 'Boosters', 'System Landscape', 'Entitlements', 'Security', and 'Usage'. The main content area is titled 'Global Account: ffa1ad65trial - Account Explorer' and includes a search bar, a 'Regions' dropdown set to 'All', and a 'Hide entities you don't have access to' checkbox. Below the search bar, there are tabs for 'Directories and Subaccounts' and 'Subaccounts (1)'. The 'Subaccounts' section shows a list of subaccounts, with one entry for 'trial' showing its provider (Amazon Web Services (AWS)), region (US East (VA) - AWS), and environment (Multi-Environment). A link at the bottom provides information on how global accounts and subaccounts relate to each other.

Hands-On: Building a web application for task management

Features include:

- Add a new task
 - Check box for completed tasks
1. Select the MyFirstApp project for web and mobile application

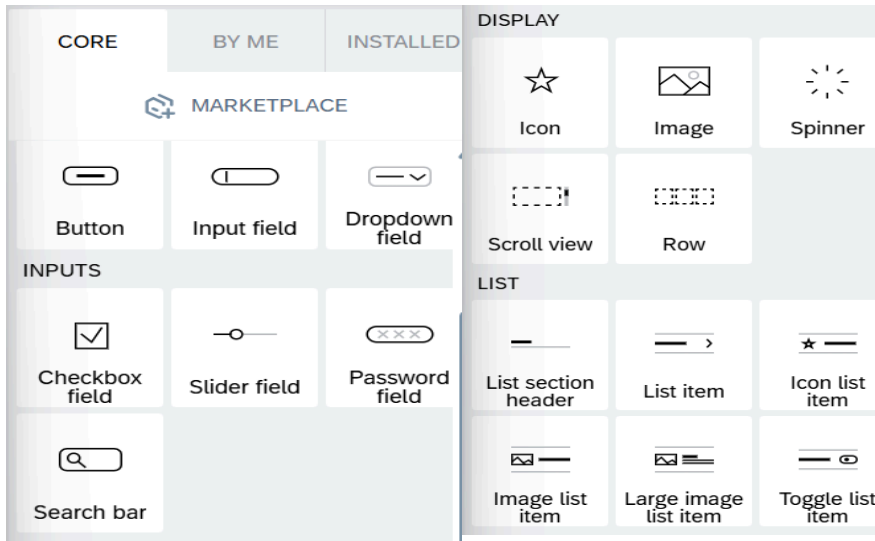

Items (2)					Create		
Name	Type	Versions	Members	Options			
 MyFirstApp	Web and Mobile Application		Me	...			
 Automation Business Process	Process Automation		Me	...			

2. Access to the project environment to build the application

The screenshot displays the SAP Build Apps editor interface for a project named 'MyFirstApp'. The top navigation bar includes the SAP Build Apps logo, a 'Preview' button, a 'Publish' button, and a 'Save' button. Below the navigation bar, the 'User Interface' tab is selected, showing a central workspace with a 'Headline' and placeholder text. The left sidebar contains a 'MARKETPLACE' section with 'ESSENTIALS' and 'LIST' categories, listing various UI components like Container, Title, Text, Button, Input field, Dropdown field, Checkbox field, Slider field, Password field, Search bar, Icon, Image, Spinner, Scroll view, Row, List section, List item, and Icon list item. The right sidebar shows the 'Properties' panel for the selected 'Home page' component, including fields for 'Page name', 'Short description', 'ID', and 'Show spinner on page load'. The bottom status bar indicates a 5% completion rate and provides links to 'YOUR LEARNING STATUS' and 'LEARN TO USE SAP BUILD APPS'.

3. Build the interfaces using components given

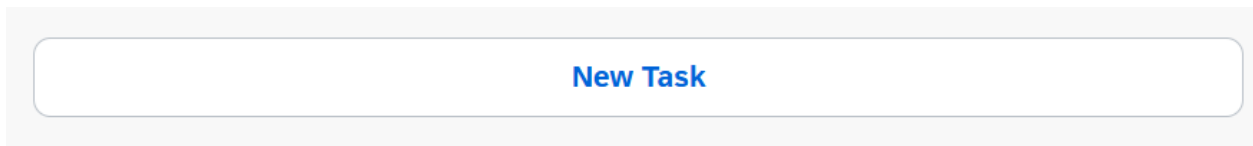

4. Running the application using web preview

Preview on web

Open web preview

5. New Task button in home page

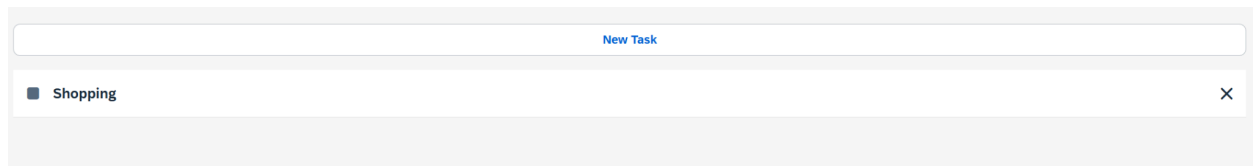

6. Enter a new task named Shopping

New Task Title:

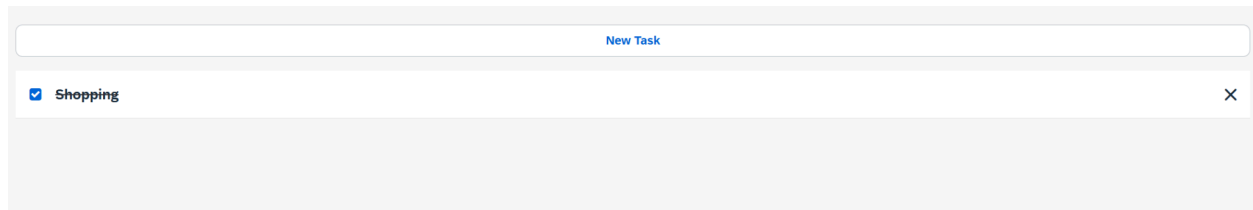

Shopping

Cancel Create Task

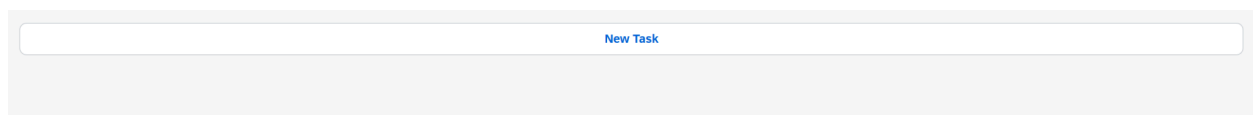

7. Shopping task already inserted into the task management

8. Click on the checkbox to mark the task is finished or done and click on the 'x' button to remove the task

9. Shopping task is removed successfully

What do I learn from the SAP Build App process ?

Through the process of learning and using SAP Build Apps, I gained an understanding of how SAP BTP is used by organizations to develop innovative applications efficiently. I learned that SAP Build Apps support both technical and non-technical users through its no-code low-code implementation, allowing applications to be created without the need of deep programming knowledge.

SAP Build provides user-friendly features such as drag and drop tools and intuitive visual logic flows. I also learned how application logic works behind the interface, including how data is created, retrieved, deleted and also how data binding connects backend data to UI components. This exploration of SAP Build Apps help me understand that a simple action like clicking a button, need to have a logic design and proper data handling to ensure the apps behaves according to what I want.
